Perum bukit berlian C72, padalarang

I am a backend developer with 3 years of experience in building and managing server infrastructure, databases, and APIs for web applications. In the last 3 months, I have also attended a full-stack developer bootcamp where I have deepened my knowledge and skills in web application development from both the frontend and backend perspectives. Additionally, I learned about teamwork, collaboration, and project management. The combination of my experience as a backend developer and a full-stack developer has enabled me to develop more effective and efficient web applications in the future.
